## INSIGHTS

## ▲ Render blocking requests — Est savings of 210 ms

Requests are blocking the page's initial render, which may delay LCP. [Deferring or inlining](#) can move these network requests out of the critical path. LCP FCP Unscored

/js/analytics.js (www.sorinpyle.com)

2.7 KiB

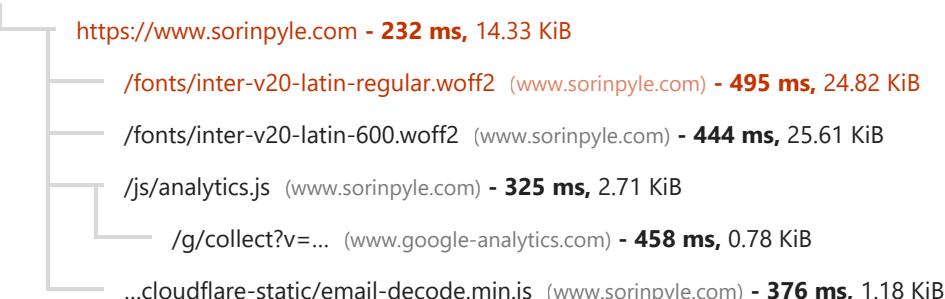

560 ms

## ⚠ Network dependency tree

Avoid chaining critical requests by reducing the length of chains, reducing the download size of resources, or deferring the download of unnecessary resources to improve page load. [LCP](#) [Unscored](#)

Maximum critical path latency: **495 ms**

### Initial Navigation

### Preconnected origins

[preconnect](#) hints help the browser establish a connection earlier in the page load, saving time when the first request for that origin is made. The following are the origins that the page preconnected to.

no origins were preconnected

### Preconnect candidates

Add [preconnect](#) hints to your most important origins, but try to use no more than 4.

No additional origins are good candidates for preconnecting

## 💡 Use efficient cache lifetimes — **Est savings of 5 KiB**

A long cache lifetime can speed up repeat visits to your page. [Learn more about caching.](#) [LCP](#) [FCP](#) [Unscored](#)

## Accessibility

These checks highlight opportunities to [improve the accessibility of your web app](#). Automatic detection can only detect a subset of issues and does not guarantee the accessibility of your web app, so [manual testing](#) is also encouraged.

## CONTRAST

LINKS MAY NOT BE DISTINGUISHABLE.

These are opportunities to improve the legibility of your content.
